2 COMPONENT PUMPS

injection pumps for fast setting injection resins,
gels and foams

Jekto Pro injection pumps are 2-component pumps with or without additional flushing pump. Injection resins with short setting times require 2-component pump systems. Jekto Pro injection pumps are suitable for all types of injection resins. 2-component pumps are mandatory for injection resins with short setting times and fast curing. ARCAN Jekto pumps are easy to clean, have a long lifetime (if cared properly with our HydroSolv system) and easy to maintain and carry.

2 COMPONENT PUMPS
