BUILDING PROTECTION FLUAT

removes salt, sinter, mould & mildew, neutralises and improves surfaces

Silex Fluat is a highly efficient building protection material. It removes salt, prevents efflorescences, mould and mildew and neutralises building materials. After the use of SilexFluat 944 the typical mouldy smell of basements and rooms with wet walls disappears fast and permanently. Concrete and cement bound materials will be chemically condensed, solidified and hardened due to crystalline creation. Additional benefit is the reduced moisture absorption and the protection against oil and grease.

BUILDING PROTECTION FLUAT

PRODUCT NAME	TECHNOLOGY	APPLICATION	BENEFIT
Silex Fluat 944	Building Protection Material Fluat	Surface Cleaning Surface Strengthening Desalination Fungicide	Salt Remover Mould Remover Mildew Remover Solidification Abrasion Resistance Anti Flowering
