RESTORATION PLASTER

dehumidification and desalination, protection for wet and humid walls

Restoration plaster protect wet and salt infested walls and enables dehumidification after previous waterproofing treatement. The elimination of leaks and raising damp is a prerequisite for the application of restoration plasters. The high permeability of Cembond 967 promotes wall drying meanwhile the big pour volume collects and stores the crystalline salts. Restoration plaster is a so-called sacrificial system, which is no longer necessary after drying and salt crystallisation.

RESTORATION PLASTER

PRODUCT NAME	TECHNOLOGY	APPLICATION	BENEFIT
Cembond 967 Restoration Plaster	Restoration Plaster	Coating – Permeable Restoration Plaster Dehumidification Desaltination	Dehumidifies Desalinates
