STABILISATION - SOIL SAND DUST

stabilisation and binding dust prevents loose soil and sand from being airborne and spilling all over the place.

Such pollutions cover photovoltaic facilities and reduce their effectivity. Airborne dust from spoil heaps or landfills pollute the surrounding landscape and dunes are destroyed by erosion. All that negative effects could be solved with surface stabilisation.

STABILISATION - SOIL SAND DUST

PRODUCT NAME	TECHNOLOGY	APPLICATION	BENEFIT
DustControl 984	Polymer Resin 1 Comp. Pump	Dust From Soil Heaps Dust From Landfills Dune Stabilisation Anti Erosion Prevents Wind Transport Of Sand	Non Hazardous Substanc No Solvents Doesn't Prevent Germination And Growth
