FEEDTHROUGH SEALING

pipe and cable penetrations, house entries and district heat sealing

Penetrations of walls or floor slabs, always carry the risk of leaks. House entries, gas, water, electricity, waste water, internet, district heating and geothermal energy enter a building and therefore the penetration need to be sealed properly. The sealing of pipe feedthrough and wall penetrations is an art. The proper sealing is often difficult because of the space conditions or the used materials. Additional difficulties are the sealing in contact with pipes, which carry warm or hot water. The advantage of the HydroBloc systems are their adjustability to changes in the cross section and the tolerance of heat. The swellability of the used materials guarantees the waterproofness due to auto repair effect.
