COATING - NON-PERMEABLE

impregnation, sealant and coating for surface protection on vapour proof surfaces

Non-Permeable coatings, impregnations and sealants are suitable for dry and vapour tight surfaces. They are not suitable for damp or permeable surfaces!

Non-permeable coatings are available as Epoxy, PMMA and Polyurethane coating. Crack bridging systems, as well as uv-resistant coatings with no yellowing effect complete the range.

The topcoats, sealants and impregnations protect concrete, screed and natural or artificial stones against abrasion, dirt, grease and oil.

All systems listed in the permeable division are suitable for vapour tight surfaces too.
