PONTOON, FLOAT FILLER

light weight polyurethane casting foam for filling and stabilisation

Floating hollow bodies such as pontoons are susceptible to corrosion, which permanently impairs their buoyancy. An elegant way of remediation is to fill the hollow bodies, pontoons with casting foam. This foam is very firm and stable and creates a high buoyancy. The foam itself does not absorb water.

PONTOON, FLOAT FILLER

PRODUCT NAME	TECHNOLOGY	APPLICATION	BENEFIT
Hydrobloc 516-P	PUR Foam 2 Component Pump	Cavity Filling Float, Pontoon Filler	No Water Absorption Tough Closed Celle Structure Slow
