THERMAL INSULATION

sprayable or castable thermal insulation

A lot of energy is lost through an insufficiently insulated roof, regardless of its use. An insulated roof contributes significantly to a better energy balance of the house. The thermal insulation can be applied from inside and outside as well e.g. on flat roofs.

When people talk about thermal insulation, they think primarily of insulation measures on the façade and under the roof. But the basement also represents a major heat leak in the house, through which up to 10 percent of the heat is lost. An additional benefit is the seamless waterproofing if the PU foam is applied from the outside of the cellar.

Our polyurethane foam systems are so-called in-situ foams and are used in a wide variety of areas. Various foam types are available for jointless sealing and thermal insulation, but also for cavity filling, which are used in the spraying or pouring process.

THERMAL INSULATION

PRODUCT NAME	TECHNOLOGY	APPLICATION	BENEFIT
HydroPor 610	PUR Foam 2 Component Pump	Thermal Insulation Cavity Filling Waterproofing Basements	Waterproofing Thermal Insulation Rigid Fireproof (Roof Application)
