BOROX AC-1009

injection resin for strengthening and stabilisation.

BOROX AC-1009 ultra-low viscous resin for ground and building material enhancement, like strengthening, stabilisation and consolidation. BOROX AC-1009 is 100% solid and UV stable without yellowing. The hydrophilic property makes BOROX the first choice for wet and soaked substrates. The excellent wetting property enables permeability into fine pores and structures. Especially building material consolidation where absolutely light and weather resistance is required makes BOROX AC-1009 the first choice.

BOROX AC-1009

BENEFIT	APPLICATION	INSTALLATION	ACCESSORIE	PRODUCT INFO
100% Solid Low Temperature Use <0°C	Facade Injection	1 Component Pump	Injection Packer	DOWNLOAD TDS
Wet Environment	Internal Strengthening		Injection Pump 1 Component	REFERENCES
Ultra Low Viscous	Soil, Rock Stabilization		Drill Hole Mortar	
UV-Resistant	Hollow Screed, Tiles		Injection Mortar
