CALSIL 972

fine injection mortar for cavity filling

Calsil 972 is a puzzolanic injection and filling mortar for cracks and cavities. This stress relieved injection glue is particularly suitable for historical monuments. Calsil restores low strength natural masonry and fills cavities in rocks or concrete securely. The excellent pumpability without sedimentation and the excellent spread even into fine pores of 0,5 mm, make Calsil 972 superior to any cement sand injection.

CALSIL 972

BENEFIT	APPLICATION	INSTALLATION	ACCESSORIE	PRODUCT INFO
No Sedimentation	Stabilisation	Screw Pump	Screw Pump	DOWNLOAD TDS
No Shrinking	Strengthening	G4 Pump	Cembond 956	REFERENCES
Perfect Spread	Cavity Filling		Epoxy Resins	
Excellent Adhesion	Historic Monuments		HydroSoil 517	
Perfect Penetration	Concrete		Restoration Plaster	
Stress Relieved	Rock		Sealing Slurry	
Puzzolanic Reaction	Masonry		Restoration Paint
