CEMBOND 956

100% better concrete quality with cement reactive polymer

Cembond 956 is Cembond Polymer Technology, the reactive additive for all cement-bonded materials. Cembond creates super adhesion, strength and stability in concrete, plaster, masonry and sealing slurries. With the use of Cembond956 we create new and unique properties in all materials. Cembond 956 is not just like any other polymer, latex or epoxy resins. Cembond polymer react actively with cement and creates a real polymer concrete. We reach 100% better quality of the final product. Excellent chemical resistance, super adhesion and outstanding bending tensile strength. Cembond 956 is much more. The tendency to efflorescence decrease, while the liquid tightness as well as the resistance against oil, grease and de-icing salt increase. Plaster made with Cembond 956 are much easier to process and sticks excellent.

CEMBOND 956

BENEFIT	APPLICATION	INSTALLATION	ACCESSORIE	PRODUCT INFO
100% Better Quality	Enhances Concrete			DOWNLOAD TDS
Compared To Original	Enhances Plaster			REFERENCES
Polymer Concrete	Enhances Mortar			
Super Adhesion	Enhances Sealing Slurries			
Super Strength				
Super Stability				
Decrease Efflorescence				
Durability				
Easier Compaction
