DUROFLEXTOPCOAT 682

UV resistant topcoat for protection

DuroFlexTopcoat 682 provides perfect surface protection with high durability, adhesion, light resistance and weather resistance. Films made of Topcoat 682 stay clear and won't yellow. Due to excellent mechanical and chemical resistance the use as protective layer on top of tiles, coatings, concrete and even GFK (glass fibre reinforced plastic) is suitable. It is possible to colour DuroFlex with Flexsol colour systems.
