HYDROBLOC 516-P

injection foam for filling big cavities and floats, 2-comp.

HydroBloc 516-P is slow reacting tough PUR foam resin for filling big cavities and floats. The perfectly closed cell structure doesn't absorb water, this recommends the application for filling pontoon's made of metal. After a while the metal may get destroyed by corrosion while the HydroBloc 516-P keeps the float afloat.

HYDROBLOC 516-P
