HYDROBLOC 715 DIFFUSION

horizontal barrier cream against raising damp,
95% water saturation

HydroBloc Diffusion 715 is a creamy horizontal barrier. The waterproofing against raising damp prevents water from entering the wall. With 99,5% active component the Diffusion cream comes without any solvents or water. Installation is easy and doesn't require any special equipment, especially for small jobs, the cartridge system is unbeatable. For bigger jobs is a hand pump available. Due to the high wetting energy, the concentrate penetrates deep into the construction and into finest pores and capillaries. Humidity and pore water are undercut and displaced. The chemical reaction creates a permanent connection and waterproofing.
