HYDROBLOC OM 593

silicat injection foam for waterproofing and stabilization

HydroBloc OM types are Organo Mineral resins, for stabilization, waterproofing and strengthening. These hybrids are made of Silicate and Polyurethane. Excellent stability, durability and adhesion qualify HydroBloc OM resins for consolidation, anchoring and stabilisation tasks, as well as stopping water inrush in tunnelling and mining. HydroBloc OM 593 comes with a slight foam factor and non-shrinking properties.
