HYDROBLOC SI 740

surface and facade hydropohisation with cream

HydroBloc Si 740 keeps mineral surfaces dry, clean and beautiful. The reactive silane connects with the building material and creates an inseparable connection. This together with the excellent wetting and penetration power and excellent hydrophobic properties results in super long-term durability. The advantage compared to a liquid impregnation system is the easy and drip-free application. Besides the usual flat facade surface, the use at complicated structures and especially overhead is much easier in comparison to the application of liquid systems.

HYDROBLOC SI 740

BENEFIT	APPLICATION	INSTALLATION	ACCESSORIE	PRODUCT INFO
Surface Protection	Surface Hydrophobisation	Roll	Surface Cleaning Agents	REFERENCES
Alkaline Resistant	Surface protection	Paint	SIlex Fluat 944	
Paintable With Dispersion Paint	Deep ground	Spray		
Excellent Penetration		Trowel		
Water Vapour Permeable				
No Film
