HYDROBLOC SI 741

surface hydrophobisation with liquid Siloxan

HydroBloc Si 741 impregnation keeps mineral surfaces dry, clean and beautiful. The solvent composition carries the active agent deep into the structure. The reactive silane connects with the building material and creates an inseparable connection and water repellent barrier. SI 741 is made for concrete, limestone, brick or gas concrete. Especially for fresh concrete is Si 741 the best possible solution. The impregnation resists air pollution, doesn't create a film or hinder the water vapour permeability. Treated surfaces are perfectly water repellent.

HYDROBLOC SI 741

BENEFIT

Surface Protection
Alkaline Resistant
Excellent Penetration
Water Vapour
Permeable
No Film
Non-Sticky

APPLICATION

Surface Impregnation
Surface Protection

INSTALLATION

Flood

ACCESSORIE

Slilex Fluat 944
Surface Cleaning Agents
