HYDROBLOC SI-742-K AQUA

surface hydrophobisation with liquid Siloxan
water based

HydroBloc Si-742-K aqua impregnation keeps mineral surfaces dry, clean and beautiful. The water based silane compound is environmental friendly and dilutable with water. The reactive silane connects with the building material and creates an inseparable connection and water repellent barrier. HydroBloc Si-742-K aqua is made for concrete, sand-lime brick, brick, gas concrete and natural stones. The impregnation resists air pollution, doesn't create a film or hinder the water vapour permeability. Treated surfaces are perfectly water repellent.

HYDROBLOC SI-742-K AQUA

BENEFIT

Surface Protection
No Film
Non-Sticky
Energy Saving
Clean Surface

APPLICATION

Hydrophobisation
Surface Protection

INSTALLATION

Flood

ACCESSORIE

Slilex Fluat 944
Surface Cleaning Agents
