HYDROX AK 1011

corrosion protection additive for HydroBloc Polygel 530

Hydrox AK 1011 is a gel additive. Acrylate gel reaction starters are corrosive until curing. Hydrox AK 1011 is an anti-corrosion additive and allows the use of non stainless steel pumps. Additionally Hydrox AK protects the reinforcement steel against corrosion in case of direct contact with reaction starters e.g. in case of malfunction of the pump equipment. Handling and dosage is easy, the additive dilutes in reaction starter component.
