INJEKTION 402

injection tube for joint sealing

Injektion 402 is an injection hose for construction joint and working joint sealing in engineering structures and tunnelling. The hose is made of high solid rubber with millions of pores through which the resin penetrates into the joint and surrounding structure. The cost efficient system is perfectly reliable, due to a special coating-protecting surface which protects from closing by cement paste.

INJEKTION 402

BENEFIT	APPLICATION	INSTALLATION	ACCESSORIE	PRODUCT INFO
Single Injection	Working Joint Sealing	With Clips	Injection Tube Accessories	DOWNLOAD TDS
Protective Coating	Construction Joint Sealing		414	REFERENCES
Easy Application	Double Wall Sealing		HydroBloc 575 Integral	
Millions Of Pores	Feedthrough Sealing		HydroBloc PU 500	
			HydroBloc PU 506	
			HydroBloc Injekt 583	
			Silox EP 800
