ROXBOND AK 1059

super strong injection mortar for adhesive anchors

Roxbond AK 1059 glues reinforcement rods, concrete, steel and masonry, even on damp substrates. The polysilicate material is suitable for fixings with particularly high standards. Roxbond AK 1059 cures without shrinking or foaming. The thixotropic setting is ideal for overhead applications without dripping or spilling. Usual applications are connecting reinforcement rods and spiral anchors.
