SEALFIX EXPANSIONSMÖRTEL 930

drilling hole mortar with hydrophobisation

SealFix Expansionsmörtel 930 drill hole filling mortar is a special mortar for closing drilling holes after the injection process. This special mortar is creamy, smooth, and easy to pump without sedimentation or honeycomb creation. SealFix Expansionsmörtel 930 is non-shrinking and fills the hole fully from bottom to top, without creating another gap. Due to the internal hydrophobisation, SealFix Expansionsmörtel 930 doesn't absorb any remaining water at all. As all ARCAN mortar systems, SealFix Expansionsmörtel 930 comes with Cembond polymer technology for perfect adhesion and workability.

SEALFIX EXPANSIONSMÖRTEL 930
