SILEX 961

reprofiling mortar for filling and repair of damaged concrete

Silex 961 is a reprofiling and filling mortar for concrete surface repair. Filling and reprofiling of damaged concrete walls is easy with Silex 961. The stable, cementitious mortar contains fibres, polymers and micro silicates and adheres perfectly. Silex mortars don't shrink and harden strain free. The hardened mortar has concrete like properties. Silex 961 is suitable for walls.
