SILEX SUSPENSION 931

injection mortar for cavity filling without sedimentation

Silex Suspension 931 is a bore hole suspension and injection mortar made for cavity filling in masonry or geological structures. The excellent adhesion and strength is perfect for stabilisation tasks, also in fine and distant areas. There is no sedimentation while waiting to be processed or while application. The pre-injection with Silex Suspension 931 closes imperfections and hinders the injection resin of getting lost, with this Silex Suspension 931 brings an important precondition for successful waterproofing.

SILEX SUSPENSION 931

BENEFIT	APPLICATION	INSTALLATION	ACCESSORIE	PRODUCT INFO
Non-Shrinking	Cavity Filling	Screw Pump	Screw Pump	DOWNLOAD TDS
Excellent Adhesion	Crack Filling		Cembond 956	REFERENCES
Resistant Against Salt And Sulphate	Gap Filling		Horizontal Barrier	
Excellent Flow	Cleft Filling		Injection Resins	
Low Viscous			HydroSoil 517	
No Sedimentation			Restoration Plaster	
			Sealing Slurry	
			Restoration Paint
