SILIBOND 971

strengthening and protection for concrete
surfaces plus hydrophobisation

SiliBond 971 is a reactive silicate solution for concrete hardening and consolidation. Suitable for new and existing concrete floors. SiliBond increases stability and waterproofing, decreases dust formation through abrasion. The product reacts with the cement and creates a crystalline structure inside the pores and capillaries, which reaches 10 - 20 mm deep. SiliBond 971 is a perfect curing and prevents fresh concrete from too quick drying. The natural appearance of concrete won't change. SiliBond 971 comes with additional hydrophobisation, which reduces the water absorption and increases the de-icing salt resistance.

SILIBOND 971

BENEFIT	APPLICATION	INSTALLATION	ACCESSORIE	PRODUCT INFO
Concrete Hardening	Surface Strengthening	Spray	Cleaning Agents For Surface	DOWNLOAD TDS
Concrete Stabilisation	Coating – Permeable	Rubber Slider		REFERENCES
Pore Filling	Protective Layer			
Less Dust	Surface Hydrophobisation			
Stain Protection	Concrete Stabilisation			
No Film Formation	Concrete Protection
