SILIBOND SI 714 REACTIVE

silicat gel for stabilisation and waterproofing

SiliBond SI 714 – binding agent for geological structures and building materials. Silibond enhances dams and embankments, waterproofs construction pits, soles, and strengthens brittle building materials. The low viscosity and the variable setting time enable a perfect penetration into fine sand and materials.

SILIBOND SI 714 REACTIVE

BENEFIT	APPLICATION	INSTALLATION	ACCESSORIE	PRODUCT INFO
Low Viscosity	Soil Stabilization	1 Component Pump		DOWNLOAD TDS
No Shrinking	Curtain Injection	2 Component Pump		REFERENCES
Rigid	Tunnel Face Pre-Injection			
Waterproofing	Tunnel Umbrella Injection			
Stone Like Material	Ground Stabilisation			
Strengthening	Foundation Pit Sealing			
	Bottom Sealing
