SILOX 860 D

epoxy mortar for surface repair on walls

Silox 860 D is a special epoxy mortar for walls. The high strength glue and smoothing compound is an excellent coating material and waterproofing. The permeable mastic is suitable for wet surfaces. Used as glue and sealant for concrete pipes and manholes, as well as adhesive for natural and artificial stones. Silox 860 D is made for wall application and correspondingly thixotropic. The sister product Silox 861 D is the smoother and non-thixotropic material for floor application. For coloured surfaces, use Silox EPW 857.
