

Hydronium®2030K

Concentrate of an algicide and disinfection agent

Hydronium®2030K is the concentrated aqueous solution of highly efficient algicides and biocides with broad activity against algae, bacteria and fungi. For application, the concentrated product is diluted with water (tap water). The dilution depends on the application.

To combat algae and mosses, we recommend a dilution of five times the amount of water. Against mould, mixtures of 1:10 are usually sufficient. The diluted solution should be applied with a pressure sprayer, - on larger areas also with a sprayer from the horticulture - with low pressure on the affected areas.

24 to 48 hours after the application - depending on the intensity of the vegetation - the surfaces can then be washed off either manually or, as appropriate, with a pressure sprayer, thus removing the remains of the vegetation. This removal is also possible in a dry state - by brushing off (as a precaution, always use a tightly closing mouthguard to protect the respiratory tract).

Product Data

Active substance	Quarter ammonium compounds
Auxiliary agents	Complexing agents and wetting agents
Solvent	Water
Appearance	Colourless, water-like liquid
Odour	Hardly noticeable
pH	Value 5 - 8

These technical information describe the present-day state of knowledge these product. They should only inform about the possibilities of application and could not release the applicator of his commitment to check the possibility to use the product for the required application. Information for processing can be found in processing instructions of our product. Information about safe handling can be found in our current safety data sheet.
