

HydroClean®524

High efficient cleaner for hardened Polyurethane and Epoxy resins.

HydroClean®524 is a solvent mixture with outstanding properties. The intensive solvent activity is perfect for reacted and hardened Polyurethane- and Epoxiresins.

Synthetic resins which are still liquid could be solved and cleaned with HydroClean®524. When the reaction process takes place and the resin is already hardened another solvent with higher activity is necessary.

The polluted parts will be placed and stored into the HydroClean®524 until the resin is weak and removable or solves itself.

HydroClean®524 is not suitable for plastics.

Use always goggles and chemical resistant gloves while handling the solvent.

Please follow always the instructions mentioned in the safety datasheet.

These technical information describe the present-day state of knowledge these product. They should only inform about the possibilities of application and could not release the applicator of his commitment to check the possibility to use the product for the required application. Information for processing can be found in processing instructions of our product. Information about safe handling can be found in our current safety data sheet.
