

## HydroClean®527

Special cleaner for oiled concrete

**HydroClean® stands for a range of special cleansers for paving, concrete, marble, calcareous rocks and for heavily oily concrete floors.**

**HydroClean®527 is a basic cleaner for heavily oiled concrete floors.**

	<b>Concentrate - dilution 1:0 - 1:10 with water</b>
	<b>Gel-like consistency, easy processing</b>
	<b>Surfaces are hardened and solidified</b>
	<b>Removes oil from cracks and pores</b>

**HydroClean®527 is a special cleaner for heavily oiled mineral soils and concrete.**

Cleaning starts on a small test area to determine the required concentration. All loose and brittle parts are removed mechanically. HydroClean®527 is diluted with 5 parts water and poured onto the surface to be cleaned. After 10 - 15 minutes of reaction time, ideally brush by machine. If this is not possible, brush manually. The cleaner foams and absorbs the dirt. Rinse off with a high-pressure water jet and repeat the process if necessary. Adjust concentration if necessary. It is recommended to let the floor dry after each cleaning cycle to be able to evaluate the result.

HydroClean®527 attacks glass surfaces aluminium and glazed ceramics. It may cause matt spots.

We recommend testing and checking for compatibility with the material to be cleaned. Surfaces that are not to be cleaned must be covered and protected against contamination.

All cleansers must be washed off with clean water. Please use the safety data sheets of each product during handling.

These technical information describe the present-day state of knowledge these product. They should only inform about the possibilities of application and could not release the applicator of his commitment to check the possibility to use the product for the required application. Information for processing can be found in processing instructions of our product. Information about safe handling can be found in our current safety data sheet.
