

SuperStop® 615

Ingeniously simple!

Stops water always and immediately

SuperStop®615 is a reactive additive for HydroBloc®575 Integral. The mixture of SuperStop®615 and HydroBloc®575 Integral reacts instantly with water. The effect is unique: even large amounts of water solidify almost spontaneously. The obtained solid is homogeneous and flows no more. It does not foam and reacts immediately further to a swellable polymer, which is hard and elastic.

Mixtures of SuperStop®615 and HydroBloc®575 Integral are stable for several hours when stored. They can be worked up with all and simple commercially available injection machines. The mixing ratio between resin and additive is not critical and can be adapted during the application.

The effect of SuperStop®615 is unique. The addition of SuperStop®615 enables to cope with extreme leakages as well as under pressure rushing water with simple techniques. Without expert knowledge, without special resins and especially without the expensive machine technique of multi component pumps.

Product data

Product delivered	Thixotrope liquid
Appearance	Milky-opaque
Density	~ 1,25 g/ml
Flash point	> 120°C
BBD	9 months after delivery date

SuperStop®615 can be stored in closed packaging under dry conditions. The product exhibits no particular hazards. A current safety data sheet is always available for further and necessary information for a safe handling, storage and waste management.

These technical information describe the present-day state of knowledge these product. They should only inform about the possibilities of application and could not release the applicator of his commitment to check the possibility to use the product for the required application. Information for processing can be found in processing instructions of our product. Information about safe handling can be found in our current safety data sheet.
